

The Vending Machine

Martin Schoeberl

Technical University of Denmark
Embedded Systems Engineering

April 10, 2025

Overview

- ▶ Your final grade
- ▶ Online exam
- ▶ The Vending Machine project
- ▶
- ▶ How did it go with the UART?

Your Final Grade

1. Your lab work, the vending machine
 - ▶ What is working (TA checks)
 - ▶ Your report
 - ▶ Basic functions is a 7, extra functions needed for a 10 or 12
2. Written exam
 - ▶ Two hour written exam

Exam Topics and Questions

- ▶ The pensum (reading list) is on the [web site](#)
- ▶ Compute maximum frequency and delays of a given circuit
- ▶ Given a Chisel description of a circuit, draw it
- ▶ Given a circuit drawing, sketch the Chisel description
- ▶ Basically what we have done in the lab
- ▶ No surprises (at least not too many ;-)
- ▶ I have uploaded some in DTU Learn

A Vending Machine from 1952

The Vending Machine

- ▶ Final project is a vending machine
- ▶ Description is on GitHub: [README.md](#)
- ▶ Will repeat the overview now
- ▶ Group work
- ▶ Final version shall be run in an FPGA
- ▶ A lot can be done with testing and simulation

The Vending Machine

- ▶ Inputs: coins, buy
- ▶ Display: price and current amount
- ▶ Output: release can or error
- ▶ Small challenge to multiplex the display
- ▶ State machine with data path is the *brain* of the VM
- ▶ Guided step by step over several weeks

Vending Machine Specification I

- ▶ Sell 1 item and not returning any money
- ▶ Set price with 5 switches (1–31 kr.)
- ▶ Display price on two 7-segment displays (hex.)
- ▶ Accept 2 and 5 kr. (two push buttons)
- ▶ Display sum on two 7-segment displays (hex.)
 - ▶ Amount entered so far
- ▶ Does not return money, left for the next purchase

Vending Machine Specification II

- ▶ Push button *Buy*
 - ▶ If not enough money, activate *alarm* as long as buy is pressed
 - ▶ If enough money, activate *release item* for as long as *buy* is pressed and reduce *sum* by the price of the item

Optional Extras

- ▶ Needed for a 10 or 12
- ▶ Display decimal numbers
- ▶ Supplement alarm by some visuals (e.g., blinking display)
- ▶ Count coins and display an alarm when compartment is full (> 20 coins)
- ▶ Have some text scrolling on the display
- ▶ Connect a UART to your VM and sending messages to your laptop
- ▶ ...
- ▶ Your ideas :-)

Design and Implementation

- ▶ Implementation shall be a state machine plus datapath
- ▶ Design your datapath on a sheet of paper
- ▶ Datapath
 - ▶ Does add and subtract
 - ▶ Contains a register to hold the sum
 - ▶ Needs some multiplexer to operate
- ▶ Display needs multiplexing
 - ▶ Implemented with some counters and a multiplexer
- ▶ Show each part of your design to a TA
 - ▶ 7-segment decoder, 7-segment with a counter, display multiplexer, complete vending machine

Draw Figures

- ▶ Drawings/schematics is another language to describe (digital) circuits
- ▶ Draw, draw, draw boxes and arrows!
- ▶ Use drawing during development
- ▶ If you cannot draw your circuit you do not understand it
- ▶ Use drawings to communicate with the TA
- ▶ Have drawings in your report
- ▶ You will *for sure* need to draw circuits at the exam ;-)

Vending Machine Design and Implementation Steps

- ▶ We started in week 6 (now we are in week 10)
- ▶ lab 6: Hexadecimal to 7-segment decoder and counter
- ▶ lab 8: Multiplexed Seven-Segment Display
- ▶ lab 10–13: Complete Vending Machine
- ▶ *Show your working design to a TA*

Final Report

- ▶ One report per group
- ▶ A single PDF
 - ▶ Your group number is part of the file name (e.g., group7.pdf)
 - ▶ Code as listing in an appendix (no .zip files)
 - ▶ Hand in in DTU Inside
- ▶ Content
 - ▶ Abstract
 - ▶ Preface (Who did what)
 - 1. Introduction and Problem Formulation
 - 2. Analysis and Design
 - 3. Implementation
 - 4. Testing
 - 5. Results
 - 6. Discussion
 - 7. Conclusion
 - ▶ List of References
 - ▶ Appendix: Chisel code

Material on the Lab GitHub

- ▶ A top-level component
- ▶ XDC file for Basys pins and frequency
- ▶ A start of a tester generating waveforms
- ▶ A simulation of the board
- ▶ Show it (in IntelliJ)

An Optional Lab

- ▶ Testing the a Vending Machine
- ▶ Black box testing (you don't see the implementation)
- ▶ I give you two implementations
- ▶ One is OK, one is broken
- ▶ Which one is broken, and what it the error?
- ▶ Issue is that you need Verilator and a C compiler to run the tests
- ▶ WSL (with Linux Ubuntu) will make it relatively easy to use Verilator (and other tools)
- ▶ Icarus Verilog could be easier?
- ▶ Therefore, only if you really, really want to do it
- ▶ Lab 10

Questions on Final Project?

Summary

- ▶ Now you have four weeks for the Vending Machine
- ▶ Should be plenty of time
- ▶ Standard solution is good for a standard grade
- ▶ Add features as you like
- ▶ Have a good time with your Vending Machine construction
