

02161: Software Engineering 1

5.1 Class Diagram

- Create a class diagram of your version of the library program either after exercise 3 or after finishing exercise 4.
- You should use one of the tools mentioned on the course Web page.
- The purpose of this class diagram is to explain a fellow student how your program works. When you draw the class diagram, have this purpose in mind. Don't include too many details, but don't exclude details necessary to understand the program.
- Show the class diagram to a fellow student and ask for his comments. Incorporate his comments if relevant.
- Send a PDF file with the class diagram and an explanation of the class diagram to `hub@imm.dtu.dk`.
