Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen,

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found.

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1)$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1,$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2)$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0,$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3)$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$.

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

$P(B1|G)$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

$$P(B1|G) = \frac{P(G|B1)P(B1)}{}$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

$$P(B1|G) = \frac{P(G|B1)P(B1)}{P(G|B1)P(B1)}$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

$$P(B1|G) = \frac{P(G|B1)P(B1)}{P(G|B1)P(B1) + P(G|B2)P(B2) + P(G|B3)P(B3)}$$

Solution for review exercise 15 (chapter 1) in Pitman

Define the events Bi that box i is chosen, and the event G that a gold coin is found. We have

$$P(G|B1) = 1, P(G|B2) = 0, P(G|B3) = \frac{1}{2}$$

We want to find $P(B1|G)$. The probability is found using Baye's rule (p.49)

$$P(B1|G) = \frac{P(G|B1)P(B1)}{P(G|B1)P(B1) + P(G|B2)P(B2) + P(G|B3)P(B3)} = \frac{2}{3}$$
