Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

thus the cumulative distribution function

Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

thus the cumulative distribution function $F(t)$ is

$$F(t)$$

Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

thus the cumulative distribution function $F(t)$ is

$$F(t) = P(T \leq t)$$

Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

thus the cumulative distribution function $F(t)$ is

$$F(t) = P(T \leq t) = 1 - P(T > t)$$

Question a) The survival function of the exponential distribution is - page 279 -

$$P(T > t) = e^{-\lambda t}$$

thus the cumulative distribution function $F(t)$ is

$$F(t) = P(T \leq t) = 1 - P(T > t) = 1 - e^{-\lambda t}$$
