

Story Telling

in Teaching Mathematics, Scientific Talks, etc.

Allan, Anders, Jakob, and Jesper

Department of Mathematics (DTU)

September 16, 2005

Outline

- 1 King Shirham—a Victim of Overwhelming Numbers
- 2 Elements of Story Telling
- 3 Exercises and Competition
- 4 Storytelling for Ph.D.-Students
 - Suggestions and examples of use
 - Categories
- 5 Award Ceremony

King Shirham—a Victim of Overwhelming Numbers

A classic tale related to mathematics.

King Shirham—a Victim of Overwhelming Numbers

A classic tale related to mathematics.

The Morale of the Story:

- Exponential growth is very fast

King Shirham—a Victim of Overwhelming Numbers

A classic tale related to mathematics.

The Morale of the Story:

- Exponential growth is very fast
- Stories can be used to illustrate technical facts/theories

What *is* a Story?

From *Oxford Advanced Learner's Dictionary*

- **Story**: An account of past/imagined events, incidents, *etc.*

What *is* a Story?

From *Oxford Advanced Learner's Dictionary*

- **Story**: An account of past/imagined events, incidents, *etc.*
- **Narrative**: The telling of a story

What *is* a Story?

From *Oxford Advanced Learner's Dictionary*

- **Story:** An account of past/imagined events, incidents, *etc.*
- **Narrative:** The telling of a story
- **Tale:**
 - a story, often one that is simple to understand
 - a series of real events, told in the manner of a story
 - a rumour, a piece of gossip or an excuse, often false or invented

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”
- Time is limited: “Stories takes up our precious time.”

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”
- Time is limited: “Stories takes up our precious time.”
- Stories may engage the emotions. Analysis is objective and impersonal (but also heartless).

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”
- Time is limited: “Stories takes up our precious time.”
- Stories may engage the emotions. Analysis is objective and impersonal (but also heartless).
- Knowledge is a vast database.

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”
- Time is limited: “Stories takes up our precious time.”
- Stories may engage the emotions. Analysis is objective and impersonal (but also heartless).
- Knowledge is a vast database.

Resistance to Story Telling

People claim:

- The drier the better. We are taught: “Analytical argumentation is good, anecdotal is bad.”
- Time is limited: “Stories takes up our precious time.”
- Stories may engage the emotions. Analysis is objective and impersonal (but also heartless).
- Knowledge is a vast database.

Weakness of only using analysis tools:

“Analysis might excite the mind, but it hardly offers a route to the heart.”

Why Should We Tell Stories?

The 1001 Nights: A story about stories

Why Should We Tell Stories?

The 1001 Nights: A story about stories

The strength of stories:

- Before human beings learned how to read and write, story telling was the medium for collective memory

Why Should We Tell Stories?

The 1001 Nights: A story about stories

The strength of stories:

- Before human beings learned how to read and write, story telling was the medium for collective memory
- Children learn from stories

Why Should We Tell Stories?

The 1001 Nights: A story about stories

The strength of stories:

- Before human beings learned how to read and write, story telling was the medium for collective memory
- Children learn from stories
- The human brain finds stories user-friendly

Why Stories Work

Using stories will:

- grab people's attention
- expand the range of perspective on an issue
- generate creativity

Stories are:

- memorable (their structure is life-like)
- economical
- entertaining
- centered on people

Why Stories Work

Using stories will:

- grab people's attention
- expand the range of perspective on an issue
- generate creativity

Stories are:

- memorable (their structure is life-like)
- economical
- entertaining
- centered on people

And they:

- encourage creativity (add life to a set of rules/theories)
- help in handling emotion
- help to make sense of puzzling situations (sense-making)

The Zambia Story—an example

Told by program director of knowledge management at World Bank in 1995.

Goal/Aim: Get department directors to support efforts at knowledge management at World Bank.

The Zambia Story—an example

Told by program director of knowledge management at World Bank in 1995.

Goal/Aim: Get department directors to support efforts at knowledge management at World Bank.

The “Zambia story”:

- is motivating
- is anecdotal and short
- lacks detail and texture (leaves mental space)

What Your Story Should Be

Stories must be:

- Entertaining (not nec. amusing or diverting)
- Art and its teller an artist (not nec. great art)

Types of Stories

How you should construct your story depends on your **aim**.
Different aims require different types of stories.

Stories can be classified as:

- Fragmentary or Comprehensive (ranging from remarks to histories)
- Real or unreal (Factual account, legend, myth, fiction, fantasy — but never true/untrue)
- Positive or negative.

Aims of Stories

Stories can be used to:

- Sparkle action

Aims of Stories

Stories can be used to:

- Sparkle action
- Transmitting values

Aims of Stories

Stories can be used to:

- Sparkle action
- Transmitting values
- Taming rumours

Aims of Stories

Stories can be used to:

- Sparkle action
- Transmitting values
- Taming rumours
- Sharing knowledge

Aims of Stories

Stories can be used to:

- Sparkle action
- Transmitting values
- Taming rumours
- Sharing knowledge
- Leading people into the future

Tools To Make a Successful Story

Some guidelines:

- Do not assume anything: Tell all that is required
- Give enough small and precise details such that the listner can paint his/her own picture
- Build up a suspension, but let the listner work to figure out the ending before you reveal it
- Change your body language and voice (may improve performance)
- Include smells, personal experience (with common interest), a sense of adventure (departure, incident, surprise / action leads to a transition to a new state (the morale))
- Practice

Exercises and the Great Competition

Plan:

- Form four groups
- Solve the problem. Rules: A groupmember other than the inventor of the story presents in plenum.

Comment: The handout may be used as a point of departure for creating a good story.

Status

- 1 King Shirham—a Victim of Overwhelming Numbers
- 2 Elements of Story Telling
- 3 Exercises and Competition
- 4 Storytelling for Ph.D.-Students**
 - Suggestions and examples of use
 - Categories
- 5 Award Ceremony

Can Ph.D.-Students Use/benefit from Storytelling?

Possible areas of use

- Teaching
- Conferences / Workshops
- Everyday use
 - Conversations with...
 - supervisor, colleagues
 - friends / laymen

Suggestions / Examples of Use 1

About my project; the creative process

Tell a story about...

- how I got this great idea
- how I got inspired (to my invention) by...
 - watching a play/ a movie
 - walking in nature (architecture, nautilus shell)
 - reading/leaning about something completely different
- how I learned from my mistakes

Suggestions / Examples of Use 2

The theory behind my project

Tell a story about...

- an anecdote about how the theory originally was conceived
- historical use/application in this or other fields
- biographical on the inventor

Suggestions / Examples of Use 3

Storytelling in teaching

[Tell a story that...]

- illustrates a concept
- graphic terminology (traveling salesman,...)
- what will happen if you do it wrong
- variation, entertainment, surprising
- motivate students, transfer enthusiasm
- collaboration among students
- memorable
- real-life applications

Suggestions / Examples of Use 4

Your examples...

Suggestions from the class...

Scientific Talks

- Read the handout “Giving Good Talks” (it is self-explanatory)
- Remember to incorporate a story in your talk.
- Listener will wake up and remember you afterwards.

And the winner is ...

Summary

- Use story telling whenever you find it an option.
- Story telling may be more relevant in your field than you thought.
