

# PREFACE

---

This M.Sc.-thesis accounts for the work done at Informatics and Mathematical Modelling, Intelligent Signal Processing Group at the Technical University of Denmark in the period from February to November 2003. The work corresponds to 45.0 ECTS-points. Associate professor Jan Larsen, and Ph.D.-student Niels Henrik Pontoppidan supervised the work. During the study, a report on the articles and litterature read, has been created. The code produced is collected on a CD.

At this point I would like to thank Jan Larsen and Niels Henrik Pontoppidan for their supervision of my project. Especially, I owe a debt of gratitude to Niels Henrik Pontoppidan for the guidance and the discussions on the work he provided, any time I needed it. I would also like to thank my family for support, and especially my brother Brian, who read the proofs of the thesis, and with whom I have had instructive discussions relevant for the thesis. Finally, a special thanks goes to my girl friend for her proofreading, and especially for her loving support and patience.

Technical University of Denmark, November, 2003
