---

<b>1</b>	<b>Introduction</b>	13
1.1	Automatic condition monitoring.....	13
1.1.1	Inspections.....	13
1.1.2	Preventing fatal errors.....	13
1.1.3	Automatic condition monitoring of engines.....	14
1.1.4	Sensors.....	14
1.1.5	Digital signal processing.....	14
<b>2</b>	<b>Thesis assumptions</b>	19
2.1	MAN B&W Diesel's Research Engine, Copenhagen.....	19
2.2	Further discussion on sensors.....	19
2.2.1	Number and location of sensors.....	20
2.3	Pre-processing and feature extraction.....	21
2.3.1	Noise.....	22
2.3.2	The mean value and the variance as features.....	23
2.3.3	Principal Component Analysis.....	23
2.4	Segmentation.....	23
2.4.1	Splitting the segmentation task in parts.....	24
2.5	Evaluating change detection systems.....	26
2.5.1	Receiver operating characteristic curves.....	26
2.6	Re-sampling.....	29
2.6.1	Enlarging the AE-RMS data set.....	29
2.6.2	The original data set, experiment no. 1.....	29
2.6.3	Re-sampling, method no. 1.....	29
2.6.4	Re-sampling, method no. 2.....	34
2.6.5	Re-sampling, method no. 3.....	35
2.6.6	Re-sampling, method no. 4.....	36
2.6.7	Re-sampling, method no. 5.....	37
2.6.9	Project specification.....	39

## Contents

<b>3</b>	<b>Pre-processing and feature extraction</b>	<b>41</b>
3.1	Mean value and standard deviation.....	41
3.2	Principal components analysis – residual error.....	46
3.2.1	PCA on sensor no. 2.....	47
3.3	Selection of cycle areas.....	52
<b>4</b>	<b>The change detection and estimation system</b>	<b>53</b>
4.1	Deviation of mean and deviation – on-line change detection algorithm.....	53
4.1.1	DMD parameters.....	57
4.1.2	Estimating the beginning of the new condition.....	58
4.1.3	The Boost function.....	59
4.1.4	Code of boost.m.....	65
4.1.5	The DMD plot.....	65
4.2	Off-line hypothesis test.....	68
4.2.1	The log-likelihood ratio for Gaussian distributed signals.....	68
4.2.2	Feature signals and Gaussian distributions.....	69
4.2.3	The log-likelihood ratio.....	72
4.2.4	Case one: Change in the mean value.....	73
4.2.5	Case two: Change in the standard deviation.....	75
4.2.6	Case three: Change in both mean value and standard deviation.....	77
4.2.7	The basic principles in the off-line hypothesis test.....	78
4.3	Off-line change point estimation.....	78
4.3.1	Maximum likelihood.....	79
4.3.2	Maximum likelihood implementation.....	80
4.4	Panel of experts.....	81
<b>5</b>	<b>Testing the system</b>	<b>83</b>
5.1	Introduction.....	83
5.2	Test on the original data.....	85
5.2.1	Pre-processing and feature extraction.....	86
5.2.2	On-line change detection.....	87
5.2.3	Off-line hypothesis test.....	93
5.2.4	Off-line change point estimation.....	95

## Contents

5.3	Test on re-sampled data.....	98
5.3.1	On-line change detection.....	98
5.3.2	Off-line hypothesis test.....	100
5.3.3	Off-line change point estimation.....	101
5.4	Noise test.....	101
5.5	Interfacing the main parts into a final system.....	102
<b>6</b>	<b>Future work</b>	<b>103</b>
6.1	Threshold for DMD algorithm decision functions.....	103
6.2	Other re-sampling methods.....	103
6.3	Gradient based change point 2 detection.....	103
6.4	Optimization of DMD parameters.....	103
6.5	Improvement of the off-line hypothesis test.....	104
6.6	Improvement of the performance of the off-line change point estimation.....	104
6.7	Implementation of a panel of experts.....	104
6.8	Selection of cycle areas.....	104
6.9	Interface the modules.....	104
	<b>Conclusion</b>	<b>105</b>
	<b>References</b>	<b>107</b>
	<b>Appendix A AE-RMS sensor signals</b>	<b>109</b>
	<b>Appendix B SE PCA Feature signals from all sensors and all experiments</b>	<b>115</b>
	<b>Appendix C DMD-plots of feature signals from all sensors and all experiments</b>	<b>125</b>
	<b>Appendix D Off-line hypothesis test on feature signals</b>	<b>157</b>
	<b>Appendix E Off-line change point estimation on feature signals</b>	<b>181</b>
	<b>Appendix F Re-sampling tests</b>	<b>205</b>
	<b>Appendix G Noise tests</b>	<b>211</b>
