Recommendation of Firstname Lastname

[A few facts about the student and the basis for me writing the recommendation. This text should include a factual description of how I met the student, but should not say more than what I could know.]
Firstname Lastname is at the fifth semester of his/her study for Bachelor in Health and Informatics. I met Firstname when he/she was in the third semester of his/her studies, in connection with the course I teach, Modeling and Programming.

[Description of the teaching or other activity that forms the basis for recommendation. In the draft, the student may provide a longer description, which I will shorten and add an assessment of the result.]
Firstname has followed my course with great interest and has engaged in discussions during lessons. He/she came well-prepared for exercises and has finished all assignments on time. The course ends with a mini-project done in groups and Firstname's group made an excellent project. At the individual oral exam, Firstname demonstrated both a deep and a broad understanding of the course content, and was given a grade 12. Thus, Firstname is among the year's 10 percent best students for my course. It is my opinion that Firstname is an ambitious and talented student who generally achieves good results.

[Info about the motivation for the recommendation.]
Firstname was recently nominated for an exchange semester at Vier University, where he/she will have an opportunity to follow elective courses in algorithms, and intelligent systems. The exchange stay will therefore benefit both Firstname's future study and his/her professional career. I would highly recommend supporting Firstname's exchange stay at Vier University.

Best regards,

Vedrana Andersen Dahl
Associate Professor
